(NOTEP) (NOTE = "Wector: Uni-ZAP XR, Site 1: ECORI; Site 2: Xhol, CDNA library was constructed from peanut cultivar Al3 (NCVIIXARA). Al3 has resistance to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluesoript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

//OTCE="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: Xhol; CDNA library was constructed from peanut cultivar A13 (NCV1XAR4). A13 has resistence to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -800C freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 50bbp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise plauescript phagemids from the Uni-ZAP XR vector; and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1329

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (NOTE = "Vector: Uni-ZAP XR; Site 1: ECCRI; Site 2: Xhol; CDNA library was constructed from peanut cultivar Al3 (NCYLIXAR4) Al3 has resistance to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid NS immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack II Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The landa library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to exise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

/OCCE="Vector: Uni-ZAP XR; Site_1: ECORI; Site_2: Xhol; CDNA library was constructed from peanut cultivar Al3 (NCV11XAR4). Al3 has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -800C freezer. Total RNA was isolated with TRIZOL-Reagent Ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Fromega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using Xhol ECORI sites adapters. The lamda library was packed into

                                                                                                                                                                                                                                                                                                                                                             /ODE="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: XhoI; CDNA library was constructed from peanut cultivar All (NCVIIXAR4). All has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI EcoRI sites adapters. The landa library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GAGGCGATGGAGTACTCGGAGTAGTGAGAACAATGAAGGAGTGATAGTCAAAGTGTCAAA 1158

and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -800C freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECRI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATCCTTGTCCTGGCTTCAGTTTCTGCAACGCATGCCAAGTCATCACCTTACCAGAAGAAA 148

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VOLTET AND TO TAPP XR, Site 1: ECORI; Site 2: XhoI; CDNA library was constructed from peanut cultivar All (NCVIIXARA). All has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (SIRCORL). mRNA was extracted and purified from total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack II Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamma library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluesecript un-amplified Library was used to excise pBluesecribt phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -800C freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(GIBCOBRL) mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The limad library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

/OCCE="Vector: Uni-ZAP XR; Site_1: ECORI; Site_2: Xhol; CDNA library was constructed from peanut cultivar Al3 (NCVIIXARA) al3 has resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(GIBCOBRL) mRNA was extracted and purified from total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to exise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1618
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1678
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1738

/UDER="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: Xhol; CDNA library was constructed from peanut cultivar Al3 (NCV11XARA). Al3 has resistance to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(GIBCOBRL). mRNA was extracted and purified from total RNA (Promega). CDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using Xhol ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /ODE="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: Xhol; CDNA library was constructed from peanut cultivar Al3 (NCVLIXARA). Al3 has resistence to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (BIECORI). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack II Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamma library was packed into phages using Gigapack III Gold (Stratagene). The uni-amplified library was used to excise plauescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1673

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1, Sequence 5, Requence 1, Sequence 15, Bequence 13, Requence 3, As Sequence 3, As Sequ
